ocarineu with dam

	Payent of root node can be itself or null depending on the question.
1211	The contraction of the second
3)	Parent
	Parent of a particular node is the one from
	which it is generated $Ex \rightarrow 8$ is the parent of
	12 and 9.
4)	Sibling and have same parent.
	The nodes which are at same level are known
	as siblings. Ext 8 and 10 nodes are siblings.
	12 and 9 are siblings.
5)	Ancestors
	Ancestor of 11 is lo and 5.
6)	Descendant
	Descendant of 8 is 12 and 9
	U
7)	Leaf nodes
	The nodes which does not have any child node
	is known as leaf nodes. Ex- 12,9,60 and 11.
	are leaf nodes.
	b code to dai
8)	Child
	Immediate next node of a Barticular node is
	Immediate next node of a farticular node is known as child node Ex - Child of 5 is 8 and
	10.
Wote	Ancestor of 60 is 10 and 5 whereas parent
	Q 60 is 10 only:
	Descendent of 5 is 8, 10, 12, 9, 60 and 11
	Of 60 is 10 only.  Descendant of 5 is 8, 10, 12, 9, 60 and 11  Whereas child node of 5 is 8 & 10 only.
	Thomas Chila How of S

	Here the output is getting printed in a single
	line but we want the O/b in the tree
	format. After printing the level we have to
	deviat andl.
	This can be done by doing the marking by
	bushing NULL which indicates level completed.
	This can be done by doing the marking by bushing NULL which indicates level completed. In this case we have to do endl & then do
	the marking toy the next level.
	1 st modification
	q.bush (NULL); // To do the marking
